

ROV FRIENDLY EYE HOOKS

GENERAL DESCRIPTION:

ROV Friendly hooks are lifting hooks that are designed to be used in the subsea environment that allows ROV's (remote operated vehicles) to rig and disconnect loads without the intervention of Divers.

These are Crosby eye hooks that have an attachment fitted to them so that an ROV can open the latch and also the steal back bone allows for a handle to be either bolted or welded.

There are several styles of handle that can be used and these are manufactured to clients design and request. By having an attachment steel back bone it doesn't encroach on Crosby design and manufacturing specification.

SPECIFICATIONS:

DIMENSIONS

Size : 7 ton WLL
 Weight in air : 7 Kg

Performance Data

Depth rating : Full Ocean depth

Materials

Hook : Forged alloy Steel
 Shackle: 25mm Grade S green Pin
 Attachments : Mild steel
